ASUS fonepad™

Data Sheet - fonepad™ ME371

Beautiful metallic design with Intel® Atom™ performance

ASUS Fonepad is ideal for people who value both the voice communication features of a smartphone and the entertainment opportunities afforded by a tablet, but prefer the convenience of carrying just one device. Fonepad is a sleek and compact tablet with a metallic design that can be held comfortably in one hand, thanks to its light 340g weight and slim 10.4mm profile. Powered by the latest Intel® Atom™ Z2420 processor with full Android compatibility, Fonepad features a perfect balance of performance and energy efficiency, with hardware-accelerated 1080p Full HD video decoding and up to 9.5 hours of battery life.

The 7-inch screen features 10-point multi-touch, and a crisp 1280 x 800 HD resolution for crisp, readable web page text and incredibly detailed photos. IPS technology ensures vibrant colour with 178-degree wide viewing angles, and images that are clear and bright, even outdoors.

Built-in 3G for mobile data and voice calls

Built-in 3G with HSPA+ mobile data means ASUS Fonepad is an always-connected mobile device for seamless web browsing, fast downloads from Google Play Store, and smooth streaming of audio and video. Thanks to its full 3G telephony support, Fonepad can also be used for voice calls using the built-in noise-cancelling digital microphone or an optional Bluetooth headset. With just one mobile data plan to pay for, running costs are also much lower than those of a separate smartphone
and 3G tablet.

Fonepad is available in 8GB and 16GB capacities, and has an SD card slot for up to 32GB of additional storage. All models feature a front 1.2-megapixel camera for easy video chat.
ASUS SonicMaster audio technology with MaxxAudio 3 processing by Waves ensures clear, well-rounded sound quality.
